# Autoscaling in AWS

- To perform autoscaling we have following options

Lets scale the yoga application

Option 1:

- Target tracking:
    - cpuutilization: 65%
    - min: 1
    - max: 5
- We will stress the system by using `stress command`

Option 2:

- Simple scaling:
    - Cpuutilzation > 80% for last 5 minutes increase 1 instance
    - Cpuutilzation < 50% for last 5 minutes decrease 1 instance
